

PROGRESS REPORT · SPRINT MAR 21, 2026

Progress Report

March 21, 2026

01 Summary

The March 21 session focused on setting up the ASP.NET Core MVC framework and building a complete frontend interface for the Attendance Management System. Primary efforts were directed at creating responsive UI components, implementing modern styling, and establishing the project structure. The login page and attendance dashboard were fully developed with interactive features including password visibility toggle, date filtering, employee search, and CSV export functionality. A professional and modern design system was implemented across all pages with gradient backgrounds, smooth animations, and comprehensive responsive design for all device sizes.

02 Tasks Completed

- Created ASP.NET Core MVC controllers (LoginController, AttendanceController) for handling authentication and attendance management DONE
- Developed responsive frontend views (Login page, Attendance Dashboard) with modern UI design and interactive elements DONE
- Implemented comprehensive CSS styling (login.css, attendance.css) with 1200+ lines of custom styles, gradient backgrounds, and animations DONE
- Built JavaScript functionality for form validation, password toggle, date filtering, employee search, and CSV export features DONE
- Configured project structure with proper models, controllers, views, and static files organization
- Implemented responsive design supporting Desktop, Laptop, Tablet, Mobile, and Small Mobile breakpoints

03 Challenges Encountered

Project structure migration

Transitioning from the previous frontend-only approach to a full ASP.NET Core MVC architecture required careful refactoring and reorganization of files.

CSS and styling complexity

Creating a comprehensive, responsive design system with multiple breakpoints and interactive states required extensive testing and refinement across different screen sizes.

04 Plans for Next Session

- Add proper user authentication and role-based access control
- Create API endpoints for real-time data fetching and attendance record management
- Convert the other wireframes into code
